Summary

Cybersecurity engineer with hands-on experience in web and mobile application penetration testing, including government and enterprise systems. Identifies high-impact vulnerabilities such as IDOR, authentication bypass, and API flaws using Burp Suite, Frida, and MobSF, with consistent high rankings in CTF competitions.

Education

- **Bachelor of Technology in Computer Science and Engineering(Cyber Security)** 2023-2027
Rajadhani Institute of Engineering and Technology

Experience

- **Cyber Security Engineer Intern** Feb 2026 - Apr 2026
Buffer Sec Remote
 - Conducted penetration testing on 6 applications (5 web, 1 Android) utilizing Burp Suite, MobSF, and Frida, successfully identifying critical flaws in authentication, APIs, and business logic.
 - Executed comprehensive security assessments across 2 government and 3 enterprise systems while strictly adhering to responsible disclosure protocols.
 - Authored detailed vulnerability reports leveraging CVSS scoring and OWASP frameworks to provide actionable remediation steps for engineering teams.
 - Validated patch implementations during re-testing phases, effectively reducing the exploitable attack surface across all tested environments.

Projects

- **VectraForge (Personal)** Github
Burp-integrated local LLM pipeline for HTTP request analysis and attack vector discovery.
 - Built a Jython-based Burp Suite extension to intercept HTTP requests and forward structured data to a FastAPI backend for analysis.
 - Reduced manual analysis effort by enabling real-time contextual detection of IDOR and logic flaws within HTTP workflows.
 - Returned structured vulnerability insights directly into Burp for inline analysis.
- **AirSentinel (Research)** Github
Passive Zero-Trust Wi-Fi Evil Twin Detection System using Unsupervised Anomaly Modeling
 - Built a passive Wi-Fi Evil Twin detection system using Isolation Forest and Zero-Trust validation on 802.11 traffic.
 - Achieved 98.49% accuracy (AUC 0.996) with high recall (0.99) across real-world environments.
 - Deployed real-time pipeline on Raspberry Pi (13.5 ms latency) with reduced false positives via sequential anomaly confirmation.

- **PicoDucky (Personal)**

Github

Raspberry Pi Pico-based USB HID attack device with an OLED Display.

- Engineered a Raspberry Pi Pico-based USB HID attack device enabling automated keystroke injection via DuckyScript.
- Built embedded firmware in C with dynamic payload execution and OLED-based payload selection.
- Implemented USB keyboard emulation for automated attack delivery in red team scenarios.

Technical Skills

- **Web Security:** Identifying and exploiting IDOR, auth bypass, SQLi, and logic flaws in real-world apps
- **Mobile Security:** Android app analysis using Frida (dynamic) and MobSF/Jadx (static)
- **Pentesting Tools:** Burp Suite, Nmap, Metasploit, Sqlmap, Ffuf, Gobuster, Hydra, Hashcat
- **Programming:** C, Python, Java, C# (scripting and exploit development basics)
- **Core Concepts:** Networking, OS, Cryptography, OWASP Top 10, Digital Forensics

CTF & Competitive Security

- **CTF Crew Member (b33troot – Top 30 in India)**

Dec 2024 – Present

ROOT RIET

Remote

- Compete in national and international CTFs with a focus on web exploitation and reverse engineering
- Solved complex challenges in web security, API vulnerabilities, and reverse engineering

Key Achievements: Top 2% TryHackMe (Global) • 2nd OWASP National CTF • 3rd CRACCON CTF • Top 15 obscuri7y CTF (Global) • 15+ Intercollege CTF Top Finishes • UST GenCys Finalist

Leadership

- **Campus Lead ROOT RIET**

Mar 2026 - Present

- Built and led a cybersecurity community impacting **600+ students**, driving hands-on training and peer mentorship initiatives.
- Executed **10+ technical workshops** on web exploitation, CTF strategy, and practical security skills.
- Led team performance in **50+ CTF competitions**, achieving **20+ wins** across national and global events.

- **Documentation Lead FOSS RIET**

Jan 2025- Present

- Led creation and maintenance of technical documentation, project wikis, and user guides for open-source initiatives.
- Coordinated with developers, designers, and contributors to ensure documentation accuracy and timely updates.

Certifications

- **Google Cybersecurity Professional Certificate**

2025
